# AI FOR TEACHERS

CHICAGO AREA READING ASSOCIATION

## AI That Brings Readers Together: Designing Connected Literacy Experiences

**Thursday, November 12, at 6:00 p.m. CT.**

AI can quickly generate reading questions and worksheets, but literacy grows through more than answering questions alone. In this practical, interactive workshop, teachers will explore how to use AI as a planning partner to create engaging, collaborative reading experiences that build conversation, student voice, and connection. Participants will leave with a ready-to-use activity that invites students to make meaning together.

**Speaker: Dr. Anne Paonessa**

### In 60 minutes, participants will:

- See how AI can help plan purposeful discussion around a shared text.
- Explore ways to build in student choice, varied perspectives, and accessible entry points.
- Draft or revise one collaborative literacy activity they can use with students.
